Turning text into speech with AI: phone greetings, voice-overs and adverts

All in One AI Created on **November 26, 2026** 2 min read

In short: with a voice model, you send a text and get back an audio file with that text spoken. Use it for the greeting on your phone line, the voice-over of a video or a short advert. It is done through the API, with the same request as images and videos, and paid in credits. See the **AI video and voice** page.

What it is for

Use	Example
Phone line	«Hello! Thank you for calling. How can we help you today?»
Video voice-over	A product explanation, read over the pictures.
Advert	A short line with this week's offer, for social media.
A page on your website	A spoken version of an instruction, for people who prefer to listen.

The request

Pick a voice model on the **«Models» tab**, «Audio» filter, and copy its id with «Copy the id». The request goes to `POST /v1/media/generations`:

```
{"model": "elevenlabs/v3/text-to-speech", "input": {"text": "Hello! Thank you for calling. How can we help you today?"}}
```

Then, as with images, call `GET /v1/media/generations/{id}` until it is `completed` and download the file from `outputs`. Each model's other fields show with `GET /v1/models/{id}`.

Without writing code, the **aio command** does it in one line: `aio generate audio "Welcome to our support line" --out welcome.mp3`. In a coding agent set up with the **MCP server**, ask: «Read this text aloud and save the audio to audio/welcome.mp3: Thank you for contacting us.»

Writing a text to be heard

1. Short sentences, one idea at a time. A long paragraph read aloud tires the listener.
2. When in doubt, write numbers the way they are said: «twenty-four hours» instead of «24h».
3. Test how acronyms and your brand names come out. If needed, spell them the way they are pronounced.
4. Listen to the whole result before you use it. If a word comes out wrong, change the sentence and generate again.

Do not imitate a real person's voice
without their written permission, and do not use a voice to pass yourself off as another person or company.

Test your program without spending:
With a `sandbox_` key, the generation completes straight away, with a sample link and 0 credits. See **how to test in the Sandbox at no cost**. Before you publish, also see **what to check in an AI video or voice**.

RECOMMENDED

Want to hear what you can do with voice in All in One AI? See the AI video and voice page.
