Seeing models and prices in the terminal: aio models and aio model

The aio Command Created on **November 28, 2026** 2 min read

Before you chat or generate, it helps to know which models there are and what they cost. In the terminal, two commands do that: `aio models` and `aio model`. Neither spends credits.

The list: aio models

```
aio models
aio models --type image
aio models --search kimi
```

It shows a table with the type, the name and the price in credits of each model.

Option	What for
`--type`	One type only: `text`, `image`, `video`, `audio` or `agent`. With `agent` you see your agents.
`--search`	Looks for a model, for example `kimi`.
`--json`	The list as JSON, to use in another program.

One model: aio model

```
aio model moonshotai/kimi-k2.7-code
```

It shows one model. For image, video and voice models, it also shows the input fields you can use with `--opt` in `aio generate`. The path, for a video:

1. `aio models --type video` and pick a model by price.

2. Copy the id and run `aio model <id>` to see the fields.

3. Generate with that model and the fields you want: `aio generate video "description" --model <id> --opt field=value`.

The prices

They are the same as on the **Models** tab of All in One AI and in the API list, `GET /v1/models`. For generations, the price is per image, per second of video or per generation, depending on the model. In chat, tokens are paid at the model price and, with a Coding Plan, the plan models spend points instead of credits.

Check the price before a long video or many images. `aio balance` shows how much balance you have.

The right id

The id in the list is what goes in `--model`, in `aio chat` and in `aio generate`. Write it in full, with the slash. If `aio` says the model does not exist (`404`), look up the id with `aio models --search`.

The default chat model appears in `aio help chat`. To use another one without writing `--model`, put its id in the `AIO_MODEL` variable.

RECOMMENDED

Want to see every model and price? Open the Models tab in All in One AI.

See All in One AI →
