When the Coding Plan points run out: carrying on with credits or stopping

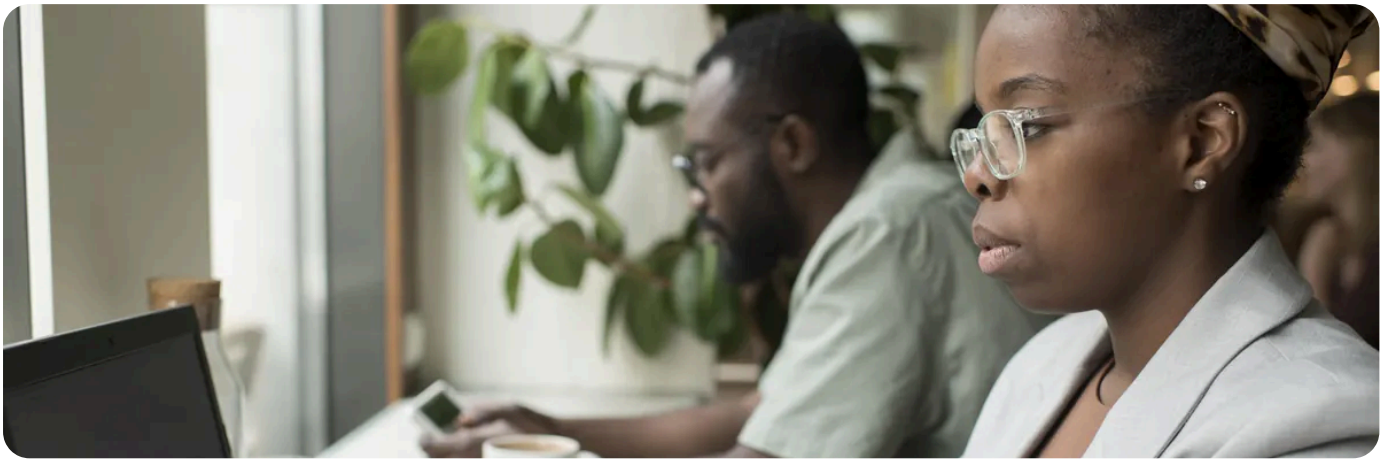
Coding Plan Created on **November 28, 2026** 2 min read



When the Coding Plan points run out, for the week or the month, there are two ways to go on: pay with credits or stop until the points come back. You choose with a switch in the **Plan tab**.

The "Use credits when the plan runs out" switch

State	What happens
On (the default)	The tools keep working. Requests are paid with the credits in your balance, at the normal price, until the points come back.
Off	Requests stop until the next reset. The API answers `429 plan_limit_reached`.
On, but with no credits	Requests stop too, with the same error.

How to change it

1. Open the **Plan tab of All in One AI**.
2. Flip the "Use credits when the plan runs out" switch.
3. If the page does not save by itself, click **Save**.

Through the API, `fallback_to_credits` in `GET /v1/ai/balance` tells you how it is set: `true` means on.

Which to choose

On, if you do not want work to stop halfway through a task. Keep credits in your balance for that. Off, if you only want to spend what the plan gives: when the points run out, the tools stop. Models outside the plan and image, video and voice generations are always paid with credits, whether the switch is on or not.

To put a ceiling on credits, the **Buy credits tab** has the Spending limits block: you choose how many credits AI can spend per day and per month. Coding Plan points do not count towards that limit.

If the plan invoice goes unpaid, the plan is suspended. Requests do not use points and are paid with your credit balance. Pay the open invoice to use the plan again.

To buy credits, see **AI credits: how to buy them**.

RECOMMENDED

Want to code with AI without stopping halfway? Visit the Coding with AI page.
