Images, video and voice with a Coding Plan: generations are paid with credits

Coding Plan Created on **November 28, 2026** 2 min read

The Coding Plan gives you points for the text models in the plan. Image, video and voice generations are not included: they are always paid with AI credits, even with an active plan.

What spends what

In an agent with the MCP server, both happen in the same chat. If the agent codes with an All in One AI model that is in the plan, that work spends points. When you ask it for an image, the `generate_image` tool spends credits. The same goes for `generate_video`, `generate_audio` and `aio generate` in the terminal.

How generations are charged

At the model price, which is in the **Models tab** and in `list_models`: per image, per second of video or per generation. We reserve the credits on the request, charge the real cost at the end and return the rest. A generation that fails costs nothing.

Keep credits in your balance

If the credits do not cover the reservation, the request is refused with `402 insufficient_credits`, even with points left in the plan. Buy credits in the **Buy credits tab**. Before a long video or many images, ask the agent for the price, with `list_models`, and the balance, with `get_balance`.

Also paid with credits

The MCP server web search, `web_search`, costs 0.5 credits per search. A search that fails costs nothing.

What each kind of generation costs: **images** and **video and voice**.

RECOMMENDED

Want images, video and voice alongside your code? Visit the Coding with AI page.
