Which hosting plan for a delivery, transport or taxi service

Plans for Trades, Industry & Transport · Created on **October 15, 2026** · Updated on **October 18, 2026** · 3 min read

The short answer: someone looking for a delivery or transport service wants to **know whether you reach where they are, what it costs and how to call**, almost always from a phone and in a hurry. It is a light site: **the entry plan is enough**. What decides is how fast it opens and the call or WhatsApp button.

What weighs, and what does not

Part of the site	What to do
Service area	Say in **text** where you work (neighbourhoods, cities, distances). It is what people look for first.
Prices	A simple table by zone or delivery type, or “from”. See **Putting WhatsApp on your site** for asking the exact price.
Call or order	A call button and a WhatsApp one at the top, big. If you take orders through the site, a short form.
Hours	When you answer, including holidays and nights. Keep it the same as on the Google Business Profile: **Being found on Google**.
Customer data	Addresses and phone numbers are personal data. Do not publish them, and ask only what is needed in the form: **Personal data protection**.

How to choose, step by step

1. **Start with the entry plan** and one or two pages: the service, the areas, the contact.

2. **Test on a phone, on mobile data,** and on a weak connection: **A site that loads on slow mobile data**.

3 **Put the direct-call phone number** at the top of every page.

4 **Review the plan** if you start having an app of your own or live delivery tracking: then it is no longer a presentation site and may need a VPS: **VPS servers**.

Do not promise times you do not control.
"Delivered in 30 minutes" is a promise that, once broken, costs a customer. Prefer "usually in X" or leave the time for confirmation. Transport rules vary by country: check yours.

For those who call on WhatsApp, a ready-written message saves time on both sides.

NEED A HAND?

Building a delivery or taxi service's site? Tell us the areas and how you receive requests today.

In our plans

Situation	Plan	Why
Start: the service, the areas, the prices and a call button	Pro	1 site, 10 GB NVMe SSD and unlimited e-mail accounts on your own domain
Several cities or services, each with its own site	Plus	6 sites and 20 GB NVMe SSD, with 200 e-mails per hour for order notices
An app of your own or live tracking of deliveries	VPS	full SSH access; the VPS1 has 1 vCPU, 2 GB RAM and 40 GB NVMe

WHEN TO MOVE UP: Move up to Plus when you open the service in another city and want a site for it. The step that really changes is the app: if you start having your own app or live delivery tracking, it is no longer a presentation site and a VPS gives you the access and the room such software asks for. Moving up can be done at any time and the site is not lost.
