Catalogue and extras through the API: showing prices on your site and buying SSL or SiteLock

WhatsApp & APIs Created on **November 13, 2026** 3 min read

The short answer: with `catalog:read`, the API returns the products on sale, the domain extensions, the currencies and the billing cycles, **with prices**, in your account currency or the one you ask for in `currency`. With `extras:read` you see the account's extras and what is for sale; with `extras:write` and `billing:purchase` you buy some of them with credit.

The catalogue

Operation	What it returns
`GET /v1/catalog/products`	Products on sale, with the price for each cycle, in pages. Filter `group_id`.
`GET /v1/catalog/tlds`	Registration, renewal and transfer prices, by number of years. A number of years that does not appear is not available. One extension only: `?extension=ao`.
`GET /v1/catalog/currencies`	The currencies accepted in `currency`.
`GET /v1/catalog/billing-cycles`	The cycle names used in prices and services.

Showing prices on your website

1. **Your server asks the API for the catalogue**, with a key that only has `catalog:read`.

2. **It keeps the answer for a while** (an hour, say), instead of asking on every visit.

3 **Your web pages read the stored copy**, never the API directly.

Do not call the API from the browser.
Browsers can only call the API from the documentation itself, so the JavaScript on one of your pages gets a CORS error. And even if it worked, the key would be visible to every visitor. The request always leaves from your server: see **the CORS error**.

The account's extras

`GET /v1/extras` returns SSL certificates, SiteLock and other products, radio streaming with its add-ons, and servers' extra IPs and disks, in pages (filter `?kind=ssl`). `GET /v1/extras/{id}` shows one of them. Access details, such as the radio's, never come through the API: you see them in Meu Interweb, at `manage_url`.

Buying with credit

`GET /v1/extras/catalog` returns the products, with periods and prices in the account currency; `purchasable` says whether it can be bought through the API. Today that means three SSL certificates (RapidSSL, GeoTrust QuickSSL Premium and DigiCert Secure Site) and SiteLock Find, Fix and Defend.

```
curl https://api.interweb.ao/v1/extras/purchase -X POST \
-H "Authorization: Bearer $RLX_API_KEY" \
-H "Content-Type: application/json" \
-H "Idempotency-Key: 7a2b9c1d-3e4f-4a5b-8c6d-9e0f1a2b3c4d" \
-d '{"product_id": 96, "billing_cycle": "annually", "site": "asuaempresa.ao"}'
```

Product	What to give
SiteLock	`site`, the site's domain. Only the periods shown in the catalogue exist: never 3 or 6 months.
Certificates	No `site`. The certificate is set up in Meu Interweb after purchase, at `manage_url`, and its status is in `certificate`.

The purchase is paid only from credit, within the key's spending limit, and needs an `Idempotency-Key`. If credit is short, the price changes or the account profile is incomplete, nothing is charged. The answer is a `202`: the action ends with the payment, and delivery is followed in `GET /v1/extras/{id}`, with the `extra_id` from the answer.

What you buy in Meu Interweb:
A server's extra IP and disk (on the server's page), radio streaming and the other catalogue products, which need choices that only exist there. For those, the API answers `422` with `portal_only` and `portal_url`. Prices for everything are also on the **pricing** page.

RECOMMENDED

Want to show our prices on your website or buy extras from your own system? See the API page.
