Associating each domain with its end client

What You Can Automate Created on **November 26, 2026** 2 min read

In short: when you resell, every domain sits in your own account. To know whose each one is, especially when the renewal comes round, associate it with your end client: on the reseller page in Meu Interweb, or through the API. It is a label for you, with the client's name. The **domain reseller page** lists it as the first thing to sort out before you sell.

In Meu Interweb

1. Open the **reseller page** and go to **Your services and clients**.
2. You will find the domains and services in your account, with the due date, the renewal price and any unpaid invoice.
3. Type the end client's name next to each domain. To remove the label, clear the name.

The same page counts how many services have **no end client** and how many are due in the next 30 days. It is the quickest way to see what is still unassociated and what you need to bill a client for before renewing.

Through the API

If your clients already live in your own system, associate them at registration time. `PUT /v1/reseller/customers/{type}/{id}` saves the label, with `type` set to `domain` or `service` and the `id` from `GET /v1/domains`. The name can be up to 80 characters; an empty `name` removes the label. It needs `reseller:write`.

```
curl https://api.interweb.ao/v1/reseller/customers/domain/913 -X PUT \
-H "Authorization: Bearer $INTERWEB_API_KEY" \
-H "Content-Type: application/json" \
-d '{"name": "João Fernandes"}'
```

`GET /v1/reseller/customers`, with `reseller:read`, lists the labelled domains and services, in pages. Filter with `type` and `search`, for example to see everything that belongs to one client. Each row has the domain, the status and the `customer_name`.

These operations are only for active Reseller Program members. Other accounts get `403 reseller_program_required`.

The label does not change the registrant.

It is there to organise your portfolio: it does not create an account for the client or change the domain contacts. The domain stays in your account and is renewed from your credit. Changing the contacts and the registrant is not in the API yet; it is done in Meu Interweb. See **changing who owns a domain**.

Always use the same name

for the same client, ideally the one in your billing system. That way a search for that name returns all of their domains, and at renewal you know straight away who to invoice.

RECOMMENDED

Keep your clients' domains organised from the very first registration. The domain reseller page covers the rest worth knowing.
