Updating or uninstalling aio, and checking the files with SHA256

The aio Command Created on **November 28, 2026** 2 min read

`aio` is a single file with no dependencies. Updating means installing again, and uninstalling is one command. If you want to confirm that the file you downloaded is the real one, the SHA256 sums are published next to it.

See the version

```
aio --version
```

It shows the version, the brand and the API address. The current version is on the **CLI page** of the docs.

Update

Run the install command again. The new file replaces the old one. On Linux and macOS:

```
curl -fsSL https://docs.interweb.ao/cli/install.sh | sh
```

On Windows, in PowerShell:

```
irm https://docs.interweb.ao/cli/install.ps1 | iex
```

If you installed with npm, use the npm command on the CLI page, which always has the package of the current version. The saved key stays in the settings file, apart from the command.

Uninstall

Installed with	To uninstall
The installer, on Linux or macOS	`curl -fsSL https://docs.interweb.ao/cli/install.sh | sh -s -- --uninstall`
The installer, on Windows	`& ([scriptblock]::Create((irm https://docs.interweb.ao/cli/install.ps1))) -Uninstall`

Installed with	To uninstall
npm	`npm uninstall -g aio-cli`

Uninstalling aio does not delete the saved key.
To delete it, run `aio auth logout` before you uninstall. The key is in `~/.config/aio/config.json` and, on Windows, in `%APPDATA%\aio\config.json`. If the key may have reached the wrong hands, revoke it in the **API Center**.

Check the files with SHA256

The installer already checks the SHA256 on its own. To check `aio.js` by hand, on Linux:

```
curl -fsSLO https://docs.interweb.ao/cli/aio.js
curl -fsSLO https://docs.interweb.ao/cli/SHA256SUMS
sha256sum --ignore-missing -c SHA256SUMS
```

The `aio.js` line should end in `OK`. On macOS, run `shasum -a 256 aio.js` and compare the result with the `aio.js` line in `SHA256SUMS`.

File, at `https://docs.interweb.ao/cli/`	What it is
`aio.js`	The command, in a single file.
The `.tgz` package	The package for npm, with the version in its name.
`install.sh` **and** `install.ps1`	The installers for Linux and macOS and for Windows.
`SHA256SUMS`	The SHA256 sums of all the files.

You can read the installers before running them. Neither asks for `sudo` or administrator rights: `aio` goes in `~/.local/bin/aio` and, on Windows, in `%LOCALAPPDATA%\aio`.

RECOMMENDED

Want every aio command? See All in One AI and the CLI page.
