Which models spend Coding Plan points, and which are paid with credits

Coding Plan Created on **November 28, 2026** 2 min read

With a Coding Plan, not every request spends points. Only requests to the text models in the plan do. The rest are paid with AI credits.

Where to see the list

In the **Plan tab**, open "Models included in the plan". The number in brackets says how many there are, and each id has a **Copy** button. Below it, the tab reminds you that with any other model, the request uses your credit balance.

The recommended coding models are all in the plan:

Model	What for
`moonshotai/kimi-k2.7-code`	Built for coding: the starting point for everyday work.
`deepseek-ai/deepseek-v4-pro`	Strong reasoning, for big changes and hard bugs.
`zai-org/glm-5.2`	Made for agents: handles tools well in long tasks.
`qwen/qwen3.8-max`	A large model, for reasoning and code across whole projects.
`deepseek-ai/deepseek-v4-flash`	Fast and cheap, for background tasks and short questions.
`zai-org/glm-5.3-flash`	Light and cheap, good for simple edits.

What spends points and what spends credits

Request	How it is paid
A text model in the plan	Points, with the plan active.

Request	How it is paid
A text model outside the plan	Credits, at the model price.
Images, videos and voice	Credits, at the model price.
The MCP server `web_search` tool	0.5 credits per search.
A plan model, when the points run out	Credits, if "Use credits when the plan runs out" is on.

Only with an active plan

Only an active plan spends points. With the plan suspended, requests use your credit balance. The `status` of the `subscription` object, in `GET /v1/ai/balance`, gives the state: `active`, `suspended`, `terminated` or `cancelled`.

Use the copied id as it is. In Aider, put `openai/` in front. In OpenCode, the provider name, for example `api/moonshotai/kimi-k2.7-code`.

RECOMMENDED

Want to know which models your plan includes? Visit the Coding with AI page.
