Changing your Meu Interweb password takes less than a minute and interrupts none of your services.

Before you start: this is **your Meu Interweb password**. It is not the same as your cPanel one, nor the one on **each e-mail account** - they are independent, and changing one does not touch the others.

How to change it

1 Log in to **Meu Interweb** and open the menu with your name, top right.

2 Choose **Change Password**.

3 Enter the current password, then the new one twice, and save.

Your session on this device stays open; on the others you will have to log in again. If you cannot remember the current one, do not keep guessing - use **the e-mail reset**, which does not ask for it.

A password worth having

Do	Avoid	Why
Three or four words in a row	Eight characters with a symbol in the middle	Length is what counts, and it types far better on a phone
A different one per panel	The same here, in cPanel and on e-mail	Lose one and you lose them all
Keeping it in a password manager	On paper, or in a file called <i>passwords</i>	It is the first place anyone looks

The step that really protects you: a password on its own is no longer enough. **Turn on two-factor authentication** - it is the only defence that still works after a password is discovered.

If you suspect someone got into the account, change the **cPanel** one too, and the one on **every e-mail account**; and read **how to tell if your site has been compromised**.
